Manual QA Audit Report - New Tours

1. Interface Review

The interface displays various buttons that seem unrelated to each other, which may confuse the user.

There is no visual hierarchy in the design, nor clear positioning of the elements. Some buttons are small and not strategically located.

The color contrast is poor, making buttons difficult to see, and the font size is small.

There is irrelevant information, including ads and destinations unrelated to the main purpose of the site.

2. Accessibility Inspection

- No input fields have associated <label> tags.

- Keyboard navigation using Tab works, but without proper labeling it is not accessible.

- Buttons lack aria-label attributes or visible text, reducing screen reader compatibility.

3. Functional Testing

- Critical Issue: The system allows registration and login without any validation, even with empty fields.

- Several menu buttons lead to "under construction" messages.

- No form validation messages are shown to the user, creating confusion.

4. Console Errors

- Mixed Content: The site attempts to load resources over HTTP on an HTTPS page.

- 404 Errors: Missing image resources like spacer.gif and black.

- Clarity.js Errors: Due to internet disconnection, various analytics scripts failed to load.

5. Network Analysis

Frequent requests observed to:

- fonts.bunny.net

- y.clarity.ms/collect

The site requests external fonts and analytics data. Some failed due to network issues.

6. Cookies

- Total Cookies: 19

- No sensitive data was detected.

- Cookies like _ga, _gid, PHPSESSID, and others are present.

- Expiration and duplication could not be determined due to browser limitations.
